Create a Simple Simulation

Christopher Huston

Unless you have been living under a rock, you know that technology has changed our daily lives. As Instructors we must up our game to keep the attention of our students. You can add new flavors to your training with no fancy software or extensive knowledge. This skill sheet will walk you through creating a simple fireground simulation to add to presentations, drills or table top exercises.

- Decide what your scenario will be.
- Open up Power Point and start with a blank slide.
- Insert an image of a structure in your district.
- Choose "INSERT" then select "CLIP ART"
- Perform a search for BURNING, FIRE, SMOKE.
- Choose your element and place where needed.
- Once you have all pieces inserted, go to "FILE > SAVE AS > Choose PNG, then "CURRENT SLIDE ONLY".

You now have a simple, but easy to create basic simulation to add more life to your presentations!
