General Information

Our Department has purchased one additional Five gas Detector, Four Gas Detectors and a calibration system. The Gas Detectors are to be mounted in all of our frontline fire apparatus. They are another tool for us to utilize. Please continue to call the gas company on possible leaks. Safety Officers are to use the five gas detector on Structure Fires to ensure a clean environment to remove our SCBA. However the Fireground is a dynamic environment where things can change rapidly. If conditions deteriorate, use common sense and Don your SCBA until the environment is retested.

A THFD Safety Officer reported that the Five Gas Detector at one Structure Fire had higher Hydrogen Cyanide levels on the outside proximity to the Structure than the interior readings.
