**Chemical Assisted Suicides**  
*A New Threat to Public Safety Personnel*

[www.fsfsupport.org](http://www.fsfsupport.org)

Chemical Suicides are becoming more common throughout the country. We have had two within the last year in the southern portion of Vigo county. One of which resulted in a Respiratory injury to a Vigo county Sheriff Deputy. Due to the risk to our fire personnel, a standard operating guideline has been developed. The Suicidal People that might take this route may not be as thorough as other suicides and may not leave a note such as the one on the left. This will put **YOU** in danger if you are not vigilant. Chemical suicides are becoming more common, but so are violent crimes, in our nation. Please be careful and **DO NOT** become complacent, always err on the side of Caution.
